# Contents

<b>1 BREAKDOWN OF GASEOUS INSULATION .....</b>	<b>1</b>
1.1 Ionisation of Gases .....	1
1.1.1 Ionisation processes in gas discharges.....	1
1.1.2 Relevant gas ionisation processes.....	2
1.2 Breakdown Characteristic in gases.....	4
1.2.1 Electron Avalanche Mechanism (Townsend Breakdown Process) .....	4
1.2.2 Paschen's Law .....	7
1.2.3 Streamer Mechanism .....	10
1.2.4 Factors affecting the breakdown voltage a Vacuum gap .....	10
1.2.5 Time lags of Spark breakdown .....	13
1.2.6 Corona Discharges .....	16
<b>2 BREAKDOWN OF LIQUID AND SOLID INSULATION .....</b>	<b>22</b>
2.1 Breakdown in Liquids .....	22
2.1.1 Breakdown of Commercial liquids .....	22
2.1.2 Breakdown due to gaseous inclusions .....	23
2.1.3 Breakdown due to liquid globules .....	23
2.1.4 Breakdown due to solid particles .....	24
2.1.5 Purification of a liquid for testing.....	25
2.2 Breakdown of Solid Insulating Materials.....	25
2.2.1 Electro-mechanical breakdown.....	25
2.2.2 Breakdown due to internal discharge.....	26
2.2.3 Surface Breakdown.....	28
2.2.4 Thermal Breakdown .....	29
2.2.5 Electro-chemical Breakdown.....	30
2.2.6 Chemical Deterioration .....	31
2.3 Breakdown of Composite Insulation .....	32
<b>3 LIGHTNING PHENOMENA .....</b>	<b>34</b>
3.1 Mechanism of Lightning .....	34
3.1.1 Breakdown Process.....	34
3.1.2 Frequency of occurrence of lightning flashes.....	36
3.2 Lightning Problem for Transmission Lines .....	36
3.2.1 Shielding by overhead ground wires .....	37
3.2.2 Calculation of Shielding angle .....	38
3.3 Area of attraction of transmission systems to lightning .....	40
3.4 Effects of Lightning on a Transmission Line .....	41
3.4.1 Strokes to a Phase-conductor.....	41

3.4.2	Strokes to a tower with no earth wire.....	41
3.4.3	Strokes to Earth wire.....	42
3.4.4	Strokes to nearby objects (Indirect Strokes) .....	43
<b>4</b>	<b>HIGH VOLTAGE TRANSIENT ANALYSIS .....</b>	<b>45</b>
4.1	Surges on Transmission Lines .....	45
4.1.1	Surge Impedance and Velocity of Propagation.....	47
4.1.2	Energy stored in surge.....	49
4.2	Reflection of Travelling waves at a Junction.....	49
4.2.1	Open circuited line fed from a infinite source .....	50
4.2.2	Short Circuit Line fed from an infinite source.....	51
4.3	Bewley Lattice Diagram .....	52
4.3.1	Analysis of an open-circuit linefed from ideal source .....	53
4.3.2	Reflections at 3 substation system .....	55
4.4	Reflection and Transmission at a T-junction.....	58
4.5	Bergeron's Method of Graphical Solution.....	59
4.6	Representation of Lumped Elements in travelling wave techniques.....	61
4.7	Branch Time Table for digital computer implementation.....	62
4.8	Transform Methods of solving Transients .....	63
<b>5</b>	<b>HIGH VOLTAGE CABLES .....</b>	<b>64</b>
5.0	High Voltage Cables .....	64
5.1	Power loss in the Cable.....	64
5.1.1	Dielectric loss.....	65
5.1.2	Conductor loss .....	65
5.1.3	Sheath loss .....	65
5.1.4	Intersheath Loss.....	65
5.1.5	Cross-bonding of Cables .....	66
5.2	Impregnated Paper Insulation .....	67
5.2.1	Properties required of cable insulation.....	68
5.2.2	Principle underlying the design of high voltage cable insulation .....	68
5.2.3	Paper insulated power cables.....	69
5.2.4	Insulation Resistance .....	69
5.2.5	Capacitance in a single-core cable.....	70
5.2.6	Three-core Cables .....	70
5.2.7	Three-core belted type Cables .....	71
5.2.8	Hochstadter or "H" type Cable.....	73
5.2.9	S.L. type Cable.....	73
5.2.10	Copper Space Factor .....	74
5.3	Dielectric Stress in a Single Core Cable.....	75
5.3.1	Cable Grading for Uniform Stress Distribution .....	76
5.3.2	Capacitance Grading .....	76
5.3.3	Intersheath Grading.....	77
5.4	Pressurised High Voltage Cables.....	79
5.4.1	Oil-pressure cables.....	79
5.4.2	Gas-pressure cables .....	81

5.4.3	External Pressure Cables .....	81
5.4.4	Internal Pressure Cables .....	81
5.5	Thermal Design of Cables.....	83
5.5.1	Current rating of Cables.....	83
5.5.2	Thermal Resistance .....	84
5.5.3	Thermal Resistance of single-core cable .....	85
5.5.4	Thermal resistance of three-core cables.....	86
5.5.5	Thermal resistance of protective coverings.....	86
5.5.6	Thermal resistance of ground around cable .....	86
5.5.7	Cables exposed to air .....	88
5.6	High Voltage Bushings.....	88
5.6.1	Simple cylindrical bushing.....	88
5.6.2	Condenser bushing.....	89
<b>6</b>	<b>MEASUREMENT OF HIGH VOLTAGES.....</b>	<b>91</b>
6.0	High Voltage Measurement.....	91
6.1	Direct Measurement of High Voltages .....	91
6.1.1	Electrostatic Voltmeters.....	91
6.1.2	Sphere gaps .....	92
6.2	Transformer and potential divider methods of measurement.....	95
6.2.1	Transformer ratio method .....	95
6.2.2	Resistive potential divider method.....	96
6.2.3	Capacitive potential divider method .....	97
6.2.4	Matching of Potential dividers.....	98
6.3	Measurement of Surges.....	105
6.3.1	Klydonograph.....	105
6.4	General measurements .....	107
6.4.1	Peak reading voltmeters.....	107
6.4.2	Oscilloscope for measurement of fast transients.....	110
6.5	Measurements of capacitance and loss tangent .....	110
6.5.1	High Voltage Schering Bridge.....	110
6.5.2	Dielectric loss measurement using Oscilloscope .....	112
6.5.3	Detection of internal discharges .....	116
6.5.4	Measurement of dielectric constant and dissipation factor of a liquid dielectric at high using a frequencies resonance method .....	119
6.5.5	Ionic Wind Voltmeter.....	122
6.5.6	Dumb-bell Voltmeter.....	122
<b>7</b>	<b>HIGH VOLTAGE GENERATORS FOR TESTING .....</b>	<b>123</b>
7.0	Generation of High Voltages .....	123
7.1	Generation of High Alternating Voltages .....	123
7.1.1	Cascade arrangement of transformers.....	123
7.1.2	Resonant Transformers .....	124
7.1.3	High frequency high voltages .....	125
7.2	Generation of High Direct Voltages .....	128

7.2.1 Rectifier circuits .....	128
7.2.2 Voltage Multiplier Circuits .....	128
7.2.3 Electrostatic generators.....	130
<b>8 HIGH VOLTAGE SURGE GENERATORS .....</b>	<b>132</b>
8.0 High Voltage Impulse Generators.....	132
8.1 Impulse Waveform.....	133
8.1.1 Single exponential waveform.....	133
8.1.2 Double exponential waveform.....	133
8.1.3 Calculation of $\alpha$ and $\beta$ from resistance and capacitance values.....	135
8.1.4 Definition of Wavefront and Wavetail times of practical waveforms.....	136
8.1.5 A valid approximate analysis of double exponential impulse generator circuit .....	137
8.1.6 Wavefront and Wavetail Control .....	138
8.2 Operation of Impulse Generator.....	139
8.2.1 Uncontrolled operation .....	139
8.2.2 Controlled operation.....	140
8.2.3 Trigatron gap .....	141
8.3 Multi-stage Impulse Generators .....	142
8.3.1 Marx Impulse Generator Circuit.....	142
8.3.2 Goodlet Impulse Generator Circuit.....	143
8.3.3 Simultaneous breakdown of successive sphere gaps.....	143
8.3.4 Generation of chopped impulse waveforms .....	147
<b>9 HIGH VOLTAGE TESTING.....</b>	<b>148</b>
9.0 High Voltage Testing Procedure.....	148
9.1 General tests carried out on High voltage equipment .....	148
9.1.1 Sustained low-frequency tests.....	149
9.1.2 High Voltage direct current tests .....	149
9.1.3 High-frequency tests.....	149
9.1.4 Surge or impulse tests.....	150
9.2 Testing of solid dielectric materials.....	151
9.2.1 Nature of dielectric breakdown .....	151
9.2.2 Determination of dielectric strength of solid dielectrics.....	152
9.3 Impulse Testing.....	153
9.4 Voltage Distribution in a Transformer Winding .....	155
9.5 Tests on Insulators.....	158
9.5.1 Type tests .....	158
9.5.2 Sample Tests.....	159
9.5.3 Routine Tests .....	159
9.6 Tests on Transformers .....	160
9.7 Tests on Cables.....	161
9.7.1 Tests on Pressurised Cables.....	162
9.8 Tests on High Voltage Bushings.....	163
9.8.1 Bushing .....	163
9.8.2 Tests on Bushings.....	163
9.9 Tests on Porcelain and toughened glass insulators for overhead power lines.....	164

<b>10 INSULATION CO-ORDINATION .....</b>	166
10.0 Insulation Co-ordination.....	166
10.1 Terminology .....	166
10.2 Conventional method of insulation co-ordination .....	168
10.3 Statistical Method of Insulation Co-ordination .....	169
10.3.1 Evaluation of Risk Factor .....	170
10.4 Length of Overhead Shielding Wire .....	170
10.4.1 Modification of Waveshape by Corona.....	171
10.5 Surge Protection.....	173
10.5.1 Spark gaps for surge protection.....	173
10.5.2 Surge Diverters .....	174
10.5.3 Selection of Surge Diverters.....	176
10.5.4 Separation limit for lightning arrestors .....	178
<b>11 HIGH VOLTAGE DIRECT CURRENT TRANSMISSION .....</b>	184
11.0 Historical Background.....	184
11.1 Comparison of a.c and d.c transmission.....	185
11.1.1 Advantages of d.c.....	185
11.1.2 Inherent problems associated with hvdc .....	188
11.1.3 Economic Comparison .....	189
11.2 Convertor arrangements and operation.....	190
11.2.1 Control angle (Delay angle).....	191
11.2.2 Commutation angle (overlap angle) .....	191
11.2.3 Current Waveforms .....	195
11.2.4 Power factor $\cos \phi$ .....	196
11.2.5 Current waveforms on a.c. system.....	197
11.2.6 Inversion .....	198
11.3 Control Characteristics .....	199
11.3.1 Natural Voltage Characteristic (NV) and the Constant Ignition Angle (CIA) control .....	199
11.3.2 Constant Extinction Angle (CEA) control .....	199
11.3.3 Constant Current Control (CC).....	200
11.3.4 Full Characteristic of Convertor.....	200
11.3.5 Compounding of Convertors.....	201
11.3.6 Per Unit Convertor Chart.....	202
11.4 Classification of d.c. links.....	203
11.4.1 Harmonics and Filters.....	204
<b>INDEX.....</b>	205

# Preface

This book has arisen out of the need to include many of the major aspects of high voltage engineering in a single volume. The book is intended primarily as a basic text book in high voltage engineering at the Final Year level of a four year undergraduate course specialising in Electrical Engineering, with emphasis on heavy current engineering. It is also expected to be of immense value to practising electrical engineers, especially to those in the electricity supply industry.

The substance of this book is organised in the following major sections. (i) Review of breakdown of insulating materials, (ii) Surge phenomena and their analysis, (iii) Generation of high voltages for testing purposes, (iv) measurement of high voltages and testing procedure, and (v) Co-ordination of insulation in a power system.

A prior knowledge of basic electrical engineering theory and electric power system analysis has been considered as a pre-requisite in writing this book. However, important background material is reviewed as a refresher where ever considered necessary.

Information for this book has been collated over a period of over 25 years from various sources, a record of which has not been maintained, during the teaching of high voltage engineering as a subject to electrical engineering undergraduates at the University of Moratuwa and its predecessors. The author is grateful to each of these sources, but regrets his inability to thank them individually.

This book, although it has not come out as a complete text book before the 1995 edition, it has nevertheless come out in parts, mainly as lecture handouts over the period of time. In fact, the original complete edition in cyclostyled form came out during the period July-September 1971 and has undergone continuous revisions.
